

Community hygiene and sanitation booklet

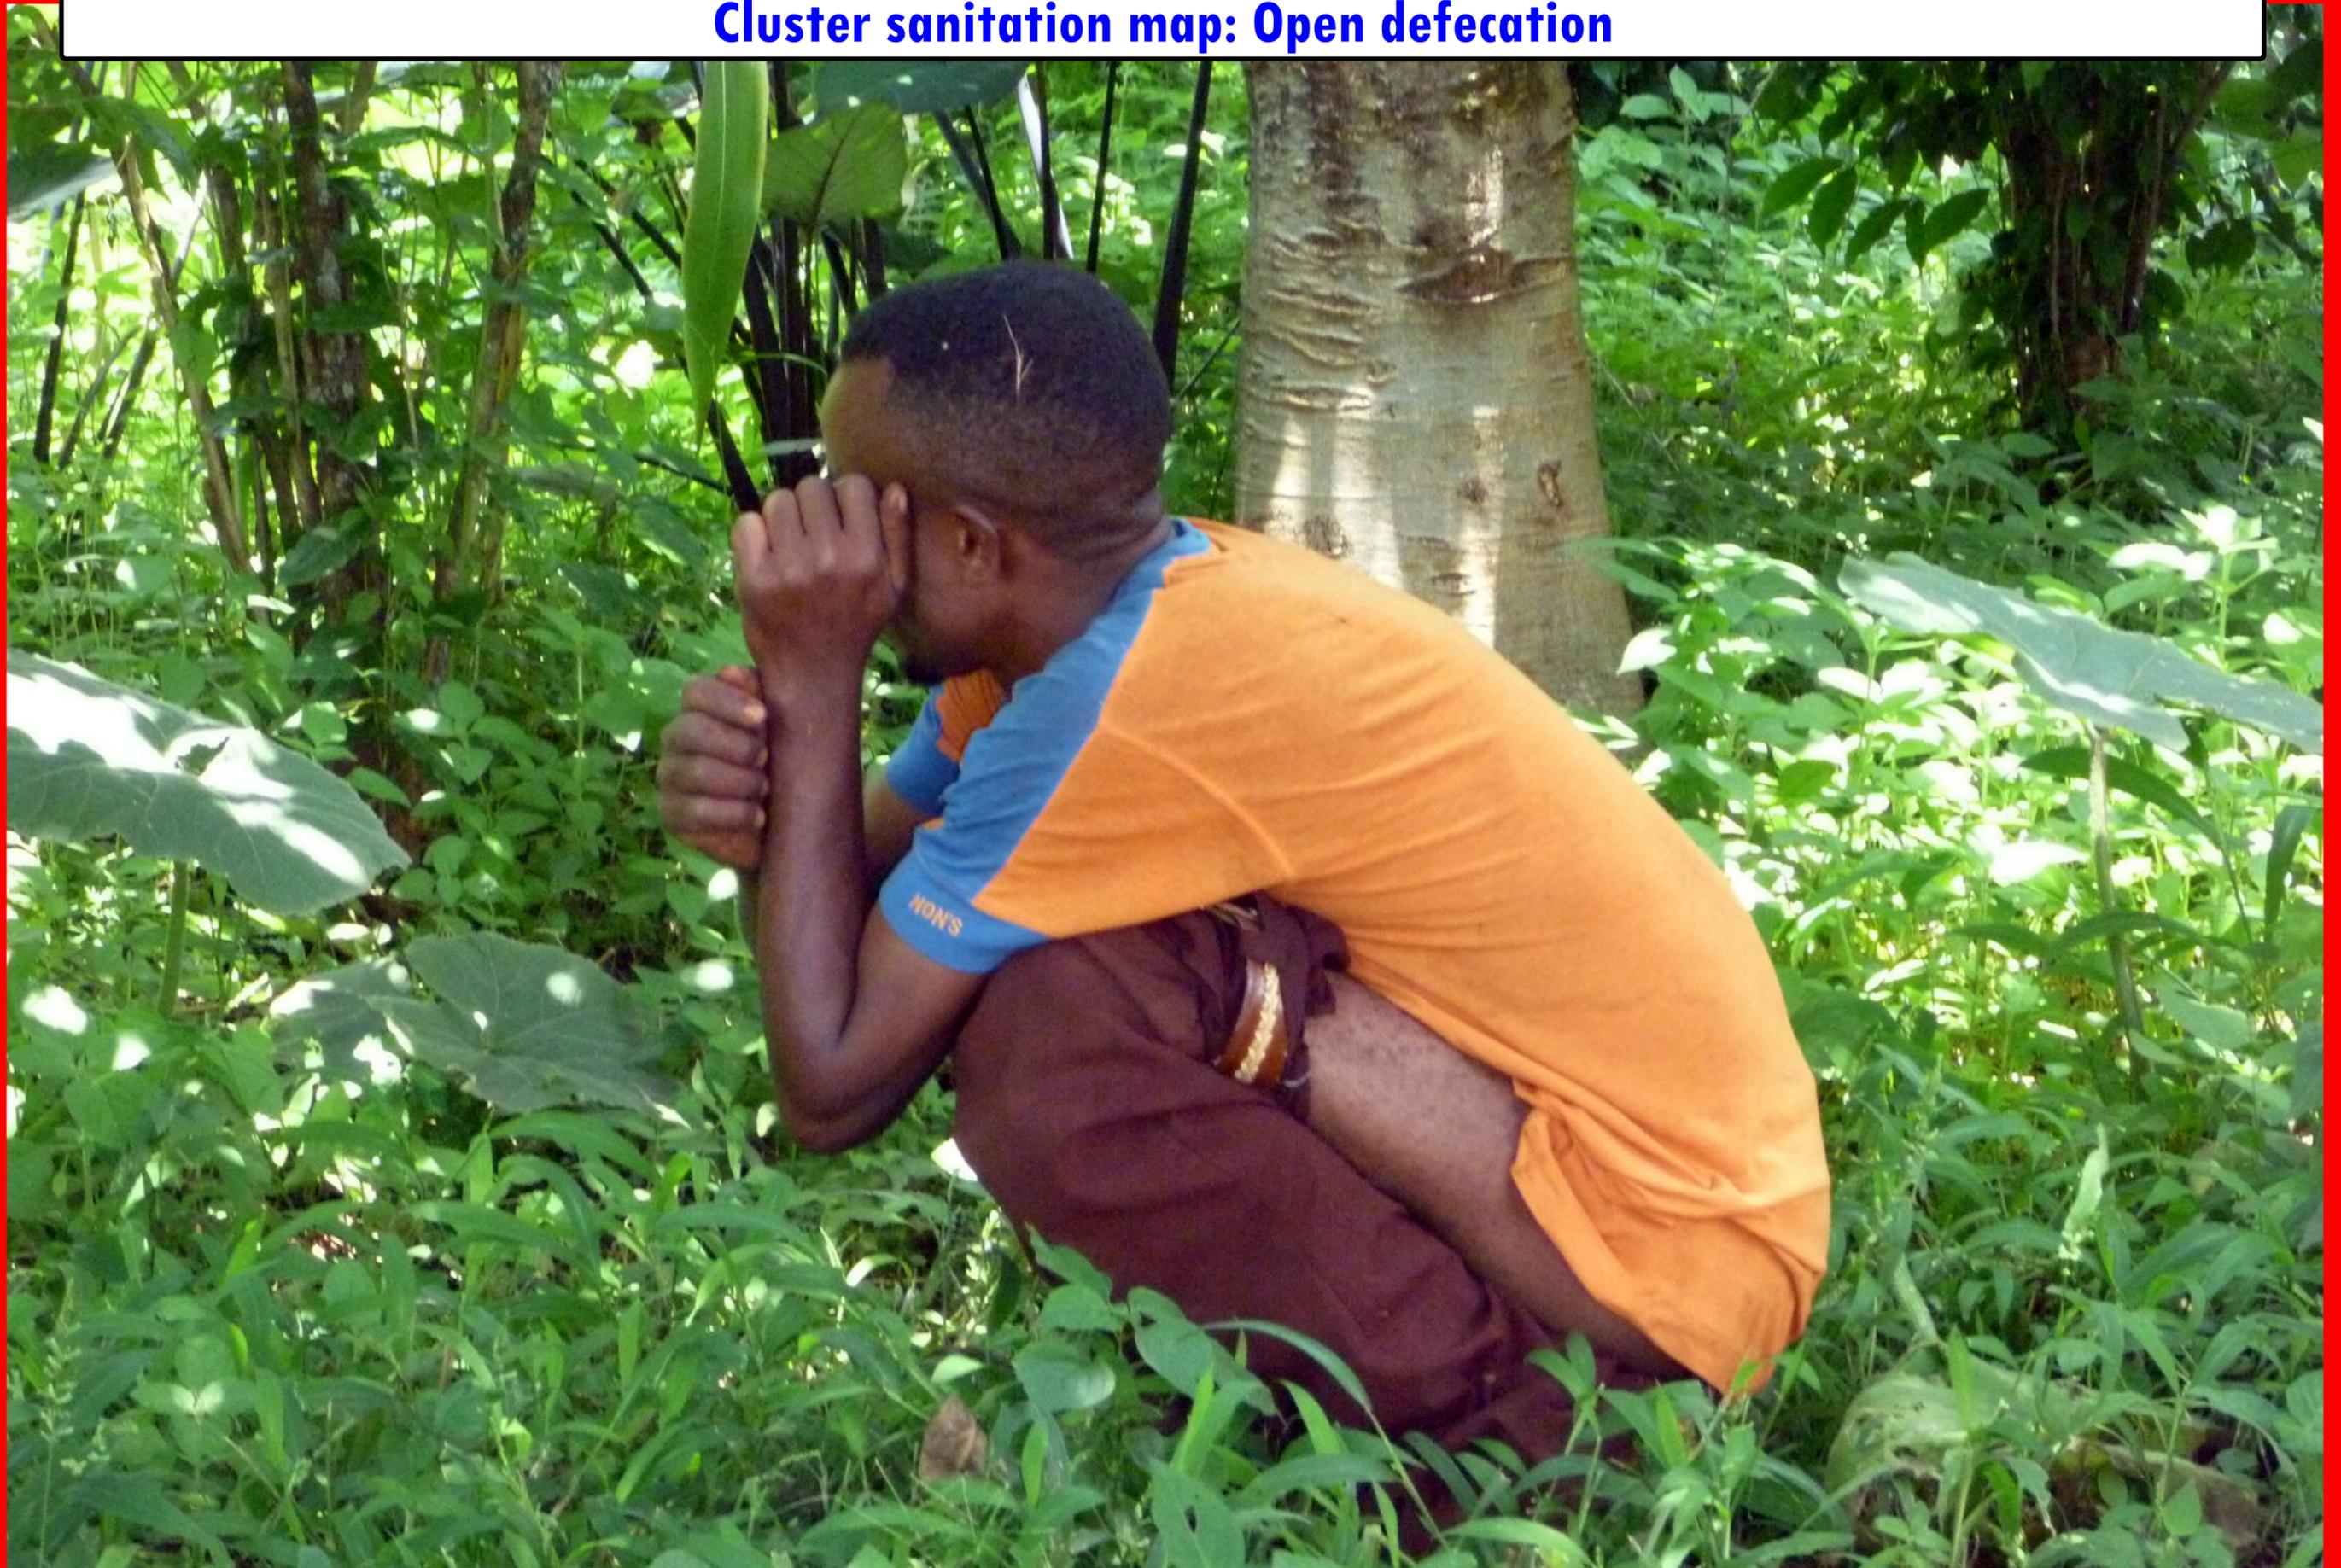

A guideline for hygiene and sanitation promoters to support communities in the acquisition of basic hygiene behaviors

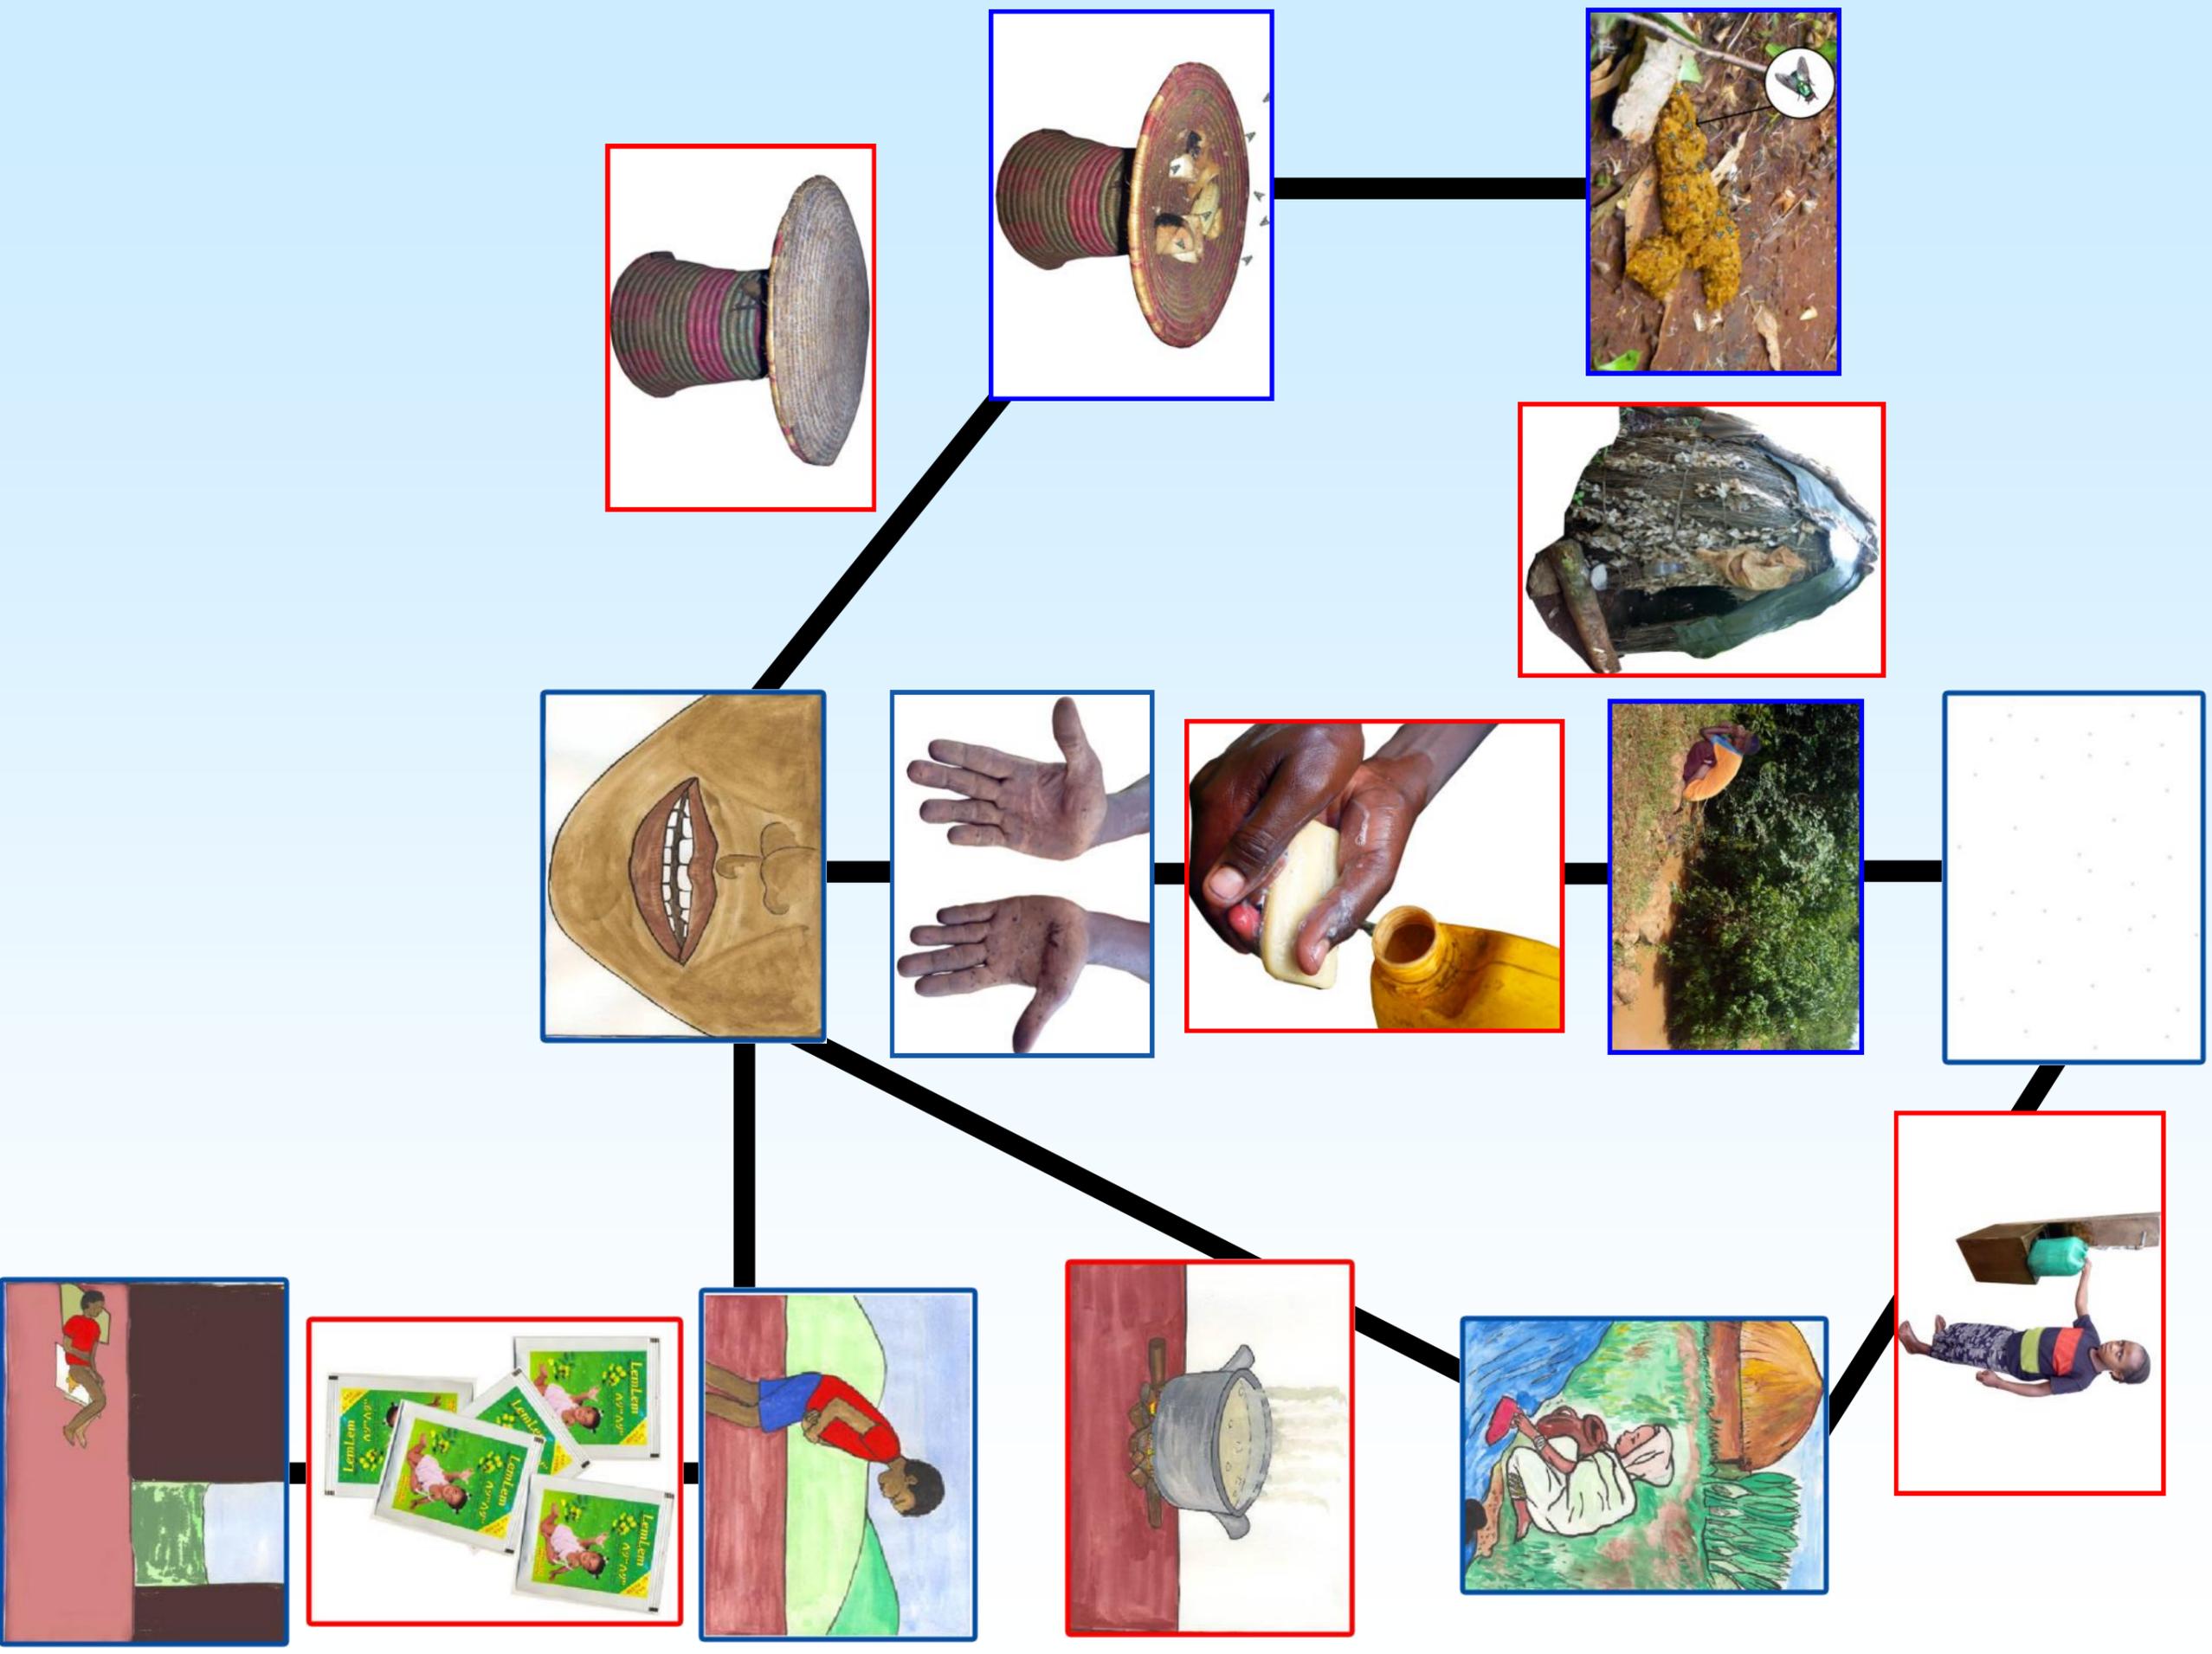

Cluster sanitation map: Family latrine

Cluster sanitation map: Open defecation

Remember the contamination route

Reach total sanitation! Put an end to open defecation!

No more open defecation

Open pit

Traditional latrine

Superstructure latrine

Public latrine

Management of water scheme

Fence the water point

Clean the water point

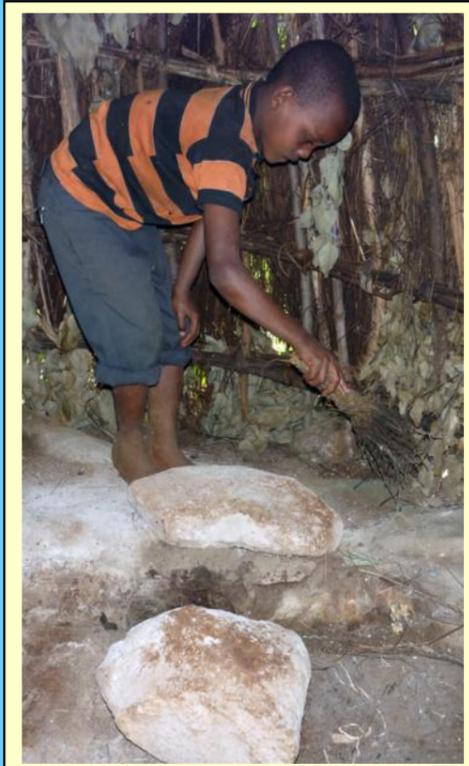

Speaking of latrine...

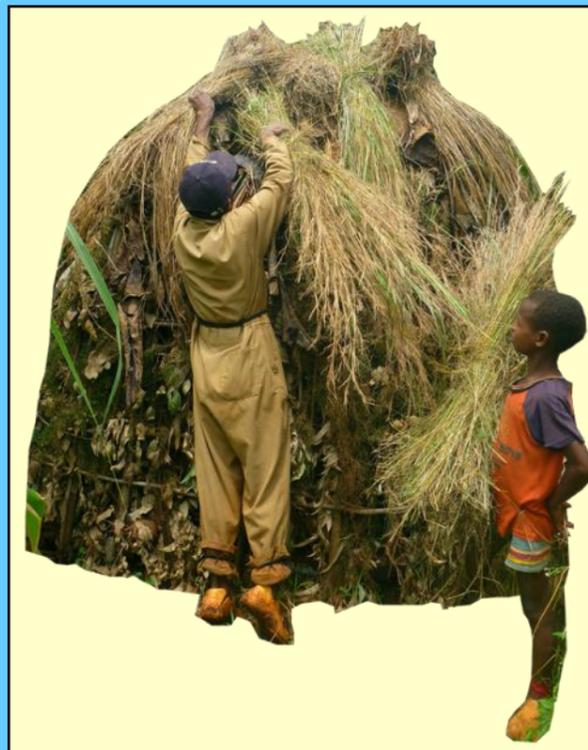

**Cover the hole to avoid flies
Put ashes regularly to avoid bad smell**

Put the baby's stool in the latrine and learn children to use latrines

Clean the latrine regularly

**Maintain so that it is always
comfortable to use**

**Discuss with the families that still
exercise open defecation and report to
Health Extension Worker if necessary**

The importance of Hand Washing after latrine use

Negotiation tool: discussing 2 types of attitude toward hand washing practice

1

Aklilu goes out of the latrine

2

He looks at his hands. They look clean.

3

He goes without washing his hands

1

Almaz goes out of the latrine

2

She wants to wash her hands

3

The hand washing facility is empty

4

Whatever Almaz goes to her house and wash her hands

The importance of Hand Washing

Critical moments for handwashing

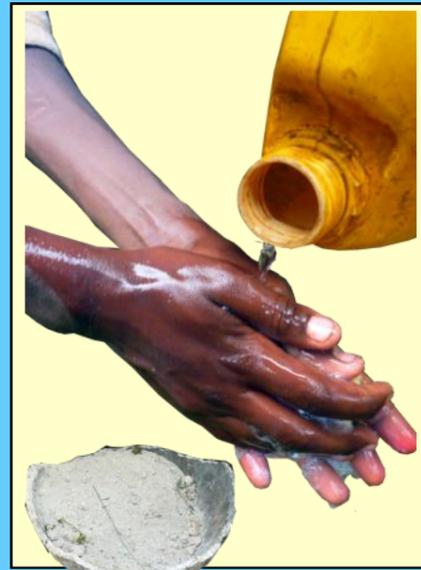

After latrine!!

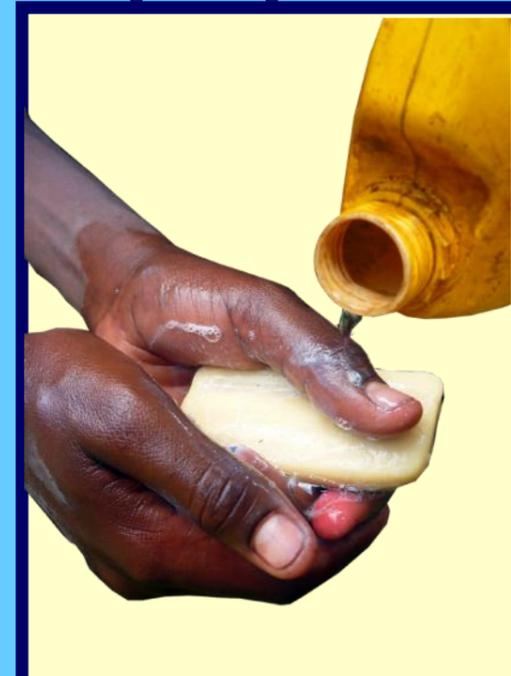

After cleaning baby's anal !!

How to wash hands?

With water and ashes

Optimal practice

With water and soap

Different facilities to wash your hands

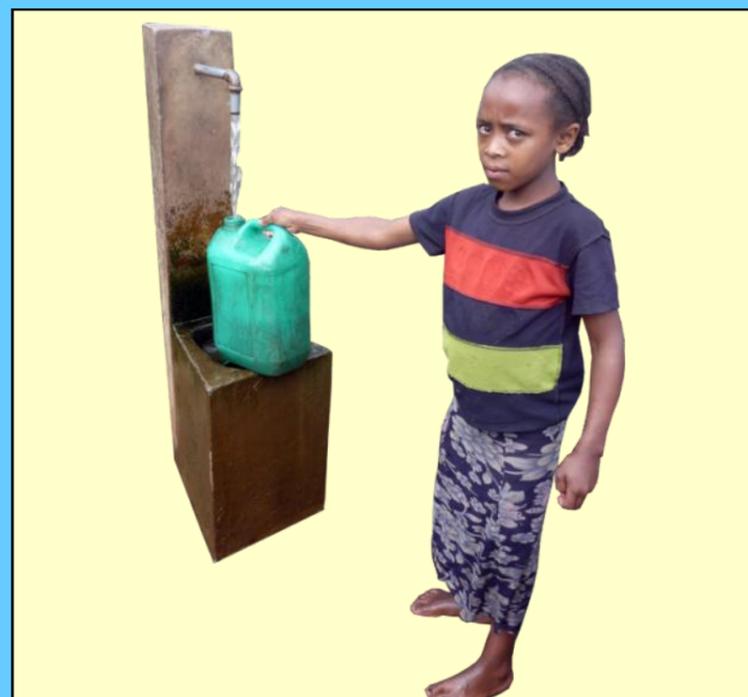

Djebena, can, pitcher, jerrican, bottle or other container used for pouring and dripping water + **ashes or soap**

Tippy tap and soap

Safe water storage and handling

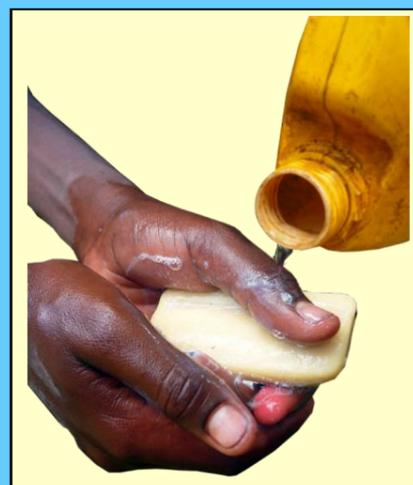

Clean the water container

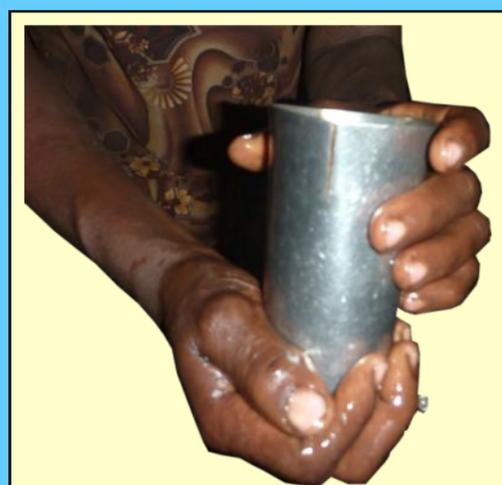

Fetch safe water at the water point

Put the water container in a safe place in the household to avoid animals and worms contamination

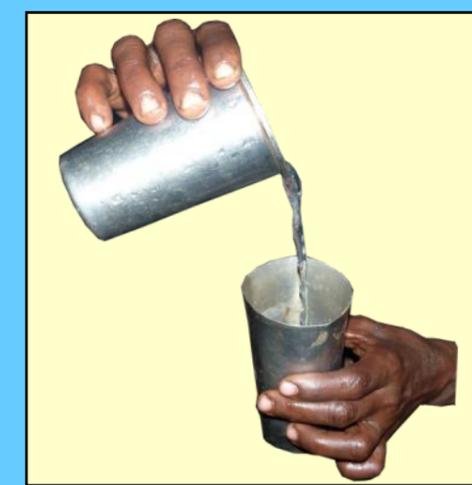

Wash your hands

Wash the cup

Pour or drip water with the clean cup

Use 2 cups: One for pouring water, one for drinking

Why use public latrine?

On his way to the market, Aptamu needs to go to the latrines.
He defecates in a field.

But Getatchew saw Aptamu and decides to talk with him.

When you defecate in the field, flies will go on the stool and can then contaminate some food...

...the family that will eat this food can get sick!

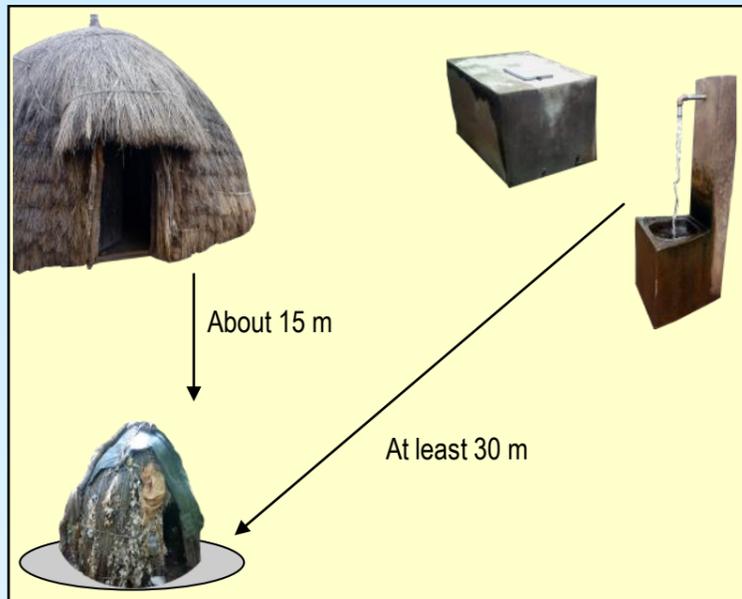

Think to the community: **use public latrines!**

And...remember to wash your hands!

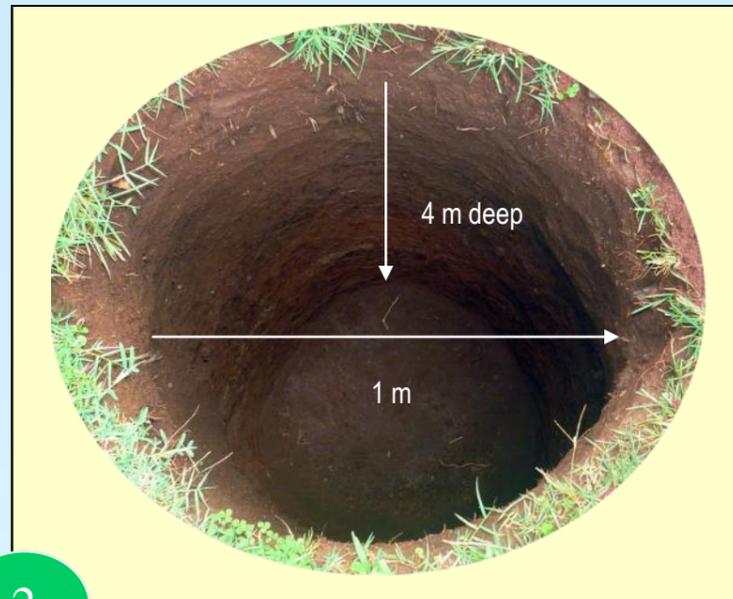

Appendice to go further: How to build a good latrine?

1

Selection of the place:

- downstream from the spring to avoid the contamination of water
- 30 m from spring box and water point
- 15 m from the house to avoid bad smell

2

Dig a hole

- 4 m deep
- 1 m large

3

Put a wooden log on the top of the hole

4

Prepare a structure in wood for the walls and roof

Think of the location of the gate for intimacy

5

Cover the roof

6

Plaster the wooden log with chicka .

Think to cover the hole
